SUMMARY

Full-Stack Developer focused on production software for real business workflows. Since mid-2025, I have built and shipped internal systems and client products across lending, HR, hospitality, e-commerce and car dealership operations. I work end to end — requirements, database design, frontend, backend, integrations and deployment — mainly with **Next.js**, **TypeScript**, **Supabase/PostgreSQL** and **Node.js**. Based in Vietnam (UTC+7), open to remote work with international teams.

CORE STRENGTHS

- › **Business systems** — turning lending, HR, booking and dealership workflows into internal tools
- › **Full-stack development** — React/Next.js frontends, Node.js and Supabase backends, deployment
- › **Database & API design** — PostgreSQL schemas, REST APIs, background jobs
- › **Access control** — role- and branch-based permissions, Row Level Security, audit logs
- › **Payments & integrations** — VietQR, Sepay, OnePay, bank webhooks, OpenAI/Gemini
- › **i18n & technical SEO** — multilingual sites in up to 8 languages, structured data

EXPERIENCE

Full-Stack Developer · Y99 Pawn Joint Stock Company

Can Tho, Vietnam · Jun 2025 – Present

Building the internal systems and public website for a pawn and lending company.

ERP & Loan Management Platform · internal system

- › Built the company's core loan platform, covering the workflow from application and approval to disbursement, repayment and collections; used daily by credit, accounting and branch staff.
- › Designed and developed **16 modules** with **60+ PostgreSQL tables**, **200+ APIs** and **140+ screens**.
- › Implemented interest and repayment-schedule calculations so credit and accounting work from the same figures.
- › Implemented role- and branch-based access control for 5 roles with Supabase Row Level Security, plus audit logging of key actions.
- › Automated payment reminders and real-time notifications; integrated VietQR and bank webhooks for payment confirmation.

Stack: Next.js, TypeScript, Supabase, PostgreSQL, Redis, Bull, TanStack Query, Zod

Y99HR · internal system

- › Replaced manual shift sign-ups with an admin dashboard for shift planning and a mobile PWA where staff register shifts, check in/out, view payslips and receive notifications.

Company Website & CMS

vayicloudcantho.com

- › Built the public loan website and a CMS for the marketing team: SEO-oriented product pages, branch map, article editor (TipTap) and automatic image optimization.
- › Connected website inquiries to the loan system, with fallback storage so no lead is lost when the integration fails.

Freelance Full-Stack Developer · Self-employed

Remote · Sep 2025 – Present

Client projects for businesses in Vietnam and Singapore, delivered end to end.

Y Hotel · booking platform & operations dashboard

yhotel.vn

- › Built a guest booking website and staff dashboard for a two-branch hotel, delivered in 12 weeks.
- › Implemented live availability and multi-room bookings, with double-booking prevented at the database level.
- › Integrated Sepay and OnePay with automatic payment confirmation; added role- and branch-based permissions and guest pages in Vietnamese, English and Chinese.

GCM Manager · car dealership management system

Internal system

- › Built an internal system that lets a car dealership follow each deal from first customer contact to signed contract.
- › Developed 16+ modules — inventory, CRM, contracts, finance and debt, registration paperwork — with Excel/PDF exports and AI-generated insights (Gemini).

Asia Night Life · multilingual venue discovery platform

[asianightlife.sg](#)

- › Built a public site and admin dashboard listing 100+ venues across 4 countries in 8 languages, with an AI assistant that recommends venues.
- › Migrated all venue URLs from IDs to readable slugs without breaking existing links; set up JSON-LD, hreflang and sitemaps.

Cafinex · e-commerce store & CMS

[cafinex.vn](#)

- › Built an online store and back office for a coffee equipment business: ~195 API routes, 41 MongoDB models and a homepage builder the team edits without a developer.
- › Added ~40-permission staff access control and Playwright end-to-end tests; deployed with Docker Compose, Nginx and Redis on a VPS.

VinFast Ngoc Anh · dealer website

[vinfast3scamau.com](#)

- › Built a dealer website whose catalog of 30 car and e-scooter models and 80+ accessories is synced from VinFast's site by Node.js scripts; includes online test-drive and deposit booking.

PROJECTS

PETID Vietnam · Founder / Product Developer · in progress

[petid.vn](#)

- › Personal product, built solo: a digital pet ID delivered as five connected apps — a mobile app, a website, and dashboards for admins, vet clinics and pet shops.
- › Anyone who finds a lost pet can scan its QR tag to reach the owner, with no app or login required; also includes health records, a lost-pet map and a multi-shop store.
- › ~65 database tables and 15 serverless functions; built with React Native, Expo, React, TypeScript, Supabase and Redis.

TECHNICAL SKILLS

Languages	TypeScript · JavaScript · SQL · Python
Frontend	React · Next.js · React Native / Expo · Tailwind CSS · shadcn/ui · Radix UI · TanStack Query · Framer Motion
Backend & Data	Node.js · REST APIs · Supabase · PostgreSQL · MongoDB · Redis · Webhooks · Background Jobs
Integrations	VietQR · Sepay · OnePay · OpenAI · Gemini · Resend · Leaflet
DevOps & Testing	Vercel · Docker · Nginx · VPS · Git · Vitest · Playwright
Engineering Practices	Domain-driven design · Access Control · Security · i18n · Technical SEO · PWA

EDUCATION

Can Tho University — Software Engineering · K47 (2021 intake)

Studies paused

LANGUAGES

Vietnamese — Native · **English** — VSTEP B1 certificate
